

Allied Tile Mfg Corp

Our Company's Green Statement

Allied Tile has been manufacturing vinyl floors for over thirty years with quality materials performing at the highest levels. Our product is commercially acceptable in healthcare, retail, education, corporate and food service.

Our product and designs are derived from nature. This motivates us to understand the importance of preserving the environment, natural resources and the world around us.

Environmental Policy

- Careful selection and use of energy and raw materials
- Environmental safety in the workplace
- Reduce waste and recycle in all our operations and dispose of waste materials in an environmentally responsible manner
- Increase use of recycled materials
- Increase plant efficiency
- Healthier workplace
- More efficient use of energy and resources

We manufacture our Design Tile Collection in our factory. All our vinyl colors are manufactured from recycled post industrial scrap. This is 75% of our product. The supplier for our vinyl uses its own generated scrap as well as recycled PVC from outside sources.

We use solar panels for our electricity in our plant.

Our new adhesive pails are made from polypropylene. They use less resin, creating less landfill waste.

The Au Natural Collection is made from 35% PVC (Virgin 74%, recycled 26%), 10% DINP, 52% CaCO₃ and 3% non heavy metal stabilizer.

Recyclability – Allied Tile can be removed and recycled to be used with other plastics in the manufacturing of new vinyl. If not recycled, it can be disposed of without any special handling and without the threat of contamination.

PVC Facts

Uses 50% less petroleum than other plastics.

Keeps carbon dioxide emissions to a minimum.

57% is derived from salt, a natural and abundant material.

Certified by Floor Score and Green Guard.
